Summary

build an attractive and responsive website to increase visitor interest. using React.js, HTML, CSS, Javascript and several library tools. also handle databases and create structured website flows using postgreSQL and mongoDB. Some of the websites that I have built can be seen on the github profile that I have listed.

I am currently working at Garuda Maintenance Facility Aeroasia as an aircraft technician for 3 years, but my interest in programming languages made me decide to switch professions as a website programmer.

I am an alumni at Suryadarma University (2018), aeronautical engineering IPK 3.89/4.00 (3 years) as a student who received a full scholarship. Previously I also studied at Raja Ali Haji Maritime University (2014-2015), 'Information Technology', for a year. that's when I started to know, use, and very love programming languages. This love has helped me develop a very good technological mindset, and given me the curiosity to learn more.

Now I'm looking for an opportunity to have a career as a web developer.

Experience

PT Garuda Maintenance Facility Aeroasia Tbk. | Tangerang kota, Banten
Senior Aircraft Maintenance Technician | 12/2018 - Present
